ABSTRACT

Climate change has not only done immense damage to nature but also affected billions of lives around the world. Many countries recorded the highest temperatures in recent few years; Iraq became the hottest place on earth with temperatures of more than 50 °C, heat waves in South Asia killed hundreds, hottest temperatures have been recorded in China, European countries experienced the hottest summer in 500 years, a third of Pakistan has been afflicted by catastrophic floods which evidently divulge that neither we know that when and where the next climate disaster will hit nor any country is immune from the repercussions of climate change

Chief Organizer/Focal Person:

Prof. Dr. Khalid Manzoor Butt

Email: dean.fohss@ucp.edu.pk

Secretary Conference/Coordinator:

Dr. Muhammad Usman Askari
